LABETTA DUO

LABETTA DUO

The Labelling Machine with Almost Unlimited Possibilities

Fully automatic labelling machine with a combination of wet glue and self-adhesive labelling

Performance range:

Dependant on the type of machine and the packaging
1,000 – 30.000 containers/hour

With this high-tech labelling machine, we are responding the customer requests for an economical, universal labelling machine that meets the needs of changing market demands. With up to 6 units that label with cold glue or self-adhesive technology depending on the requirements, any bottle design can be realised.

The design of this compact machine is extremely user-friendly and uncomplicated.

System Advantages of the GERNEP LABETTA DUO

- Tried and proven wet-glue labelling with high-end technology.
- Exact self-adhesive labelling with servo motor controlled dispensers.
- The different labelling systems can be used individually or also combined. In order to be a match for all future labelling requirements, the control cam is segmented and therefore easy to change.
- Compact, user-friendly machine design.
- Easy operation through simple programming and calling of bottle design programmes.
- High machine availability through brand-name components in the drive and controller.
- Reliable PLC controller tried and proven a thousand times over.
- Economical conversion even after many years through our practical modular construction.

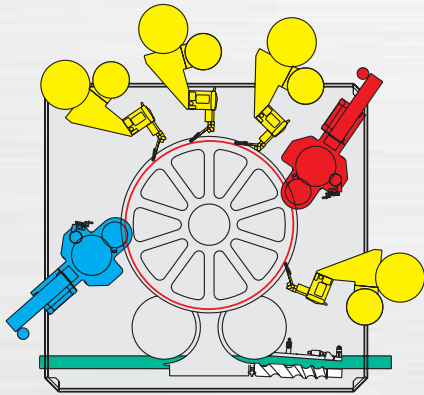

Our Configuration Possibilities:

The GERNEP LABETTA DUO was developed specifically for high-quality, exclusive labelling and filling operation, which must respond quickly and easily to a great variety of customer wishes.

Paper and plastic labels as well as labels in the no-label-look can be processed flexibly.

Perfected for innovative labelling with up to 6 labels on one bottle

How it functions – multifunctional, user-friendly, and reliable

Advantages of wet glue system

- low label costs
- processing of dry, damp, and wet bottles
- easy to operate
- continuous production through easy label refill during operation
- economic utilisation through continuous operation

Advantages of self-adhesive labelling

- no cost for label change parts
- innovative, exclusive, label designs are possible
- short conversion times
- shorter cleaning and maintenance times
- processing of no-label-look as well as waterproof plastic labels

Wet-glue labelling with high-end technology

For universal labelling of glass and plastic bottles, we use our tried and proven labelling unit with a steel gluing roller and rubber-coated pallets. The quiet running of the unit, which runs in a closed oil bath, makes the highest performance possible with absolute precision.

Flexible Self-Adhesive Labelling

For high-quality product labels, self-adhesive labelling is being used more and more. In addition to the cost savings from doing away with label holders and pallet fittings, there is the high print quality and the possibility of having labels in the no-label-look. Our precise, servo-controlled label delivery makes it possible to have absolutely accurate placement, even in bottle recesses or raised areas.

With up to 6 labels per bottle, the LABETTA DUO is the ideal labelling machine for sales-promoting bottle designs.

Special Attachments:

Through our flexible modular system, we can adapt the LABETTA DUO to different requirements or retrofit it afterwards in a cost-conscious way. That way, you are ready for all future labelling requirements with a LABETTA DUO labelling machine.

We would be happy to advise you on the possibilities that this labelling machine provides.

Mechanical Container Alignment:

To align the labels for recessed or raised areas such as seals and the like, we offer reliable mechanical alignment using bottom or sidewall cams on the container.

Electronic Container Alignment:

Depending on the shape of the packaging and the labelling requirements, photoelectric alignment can be installed. Using pulse control, a correctly aligned label position is achieved.

Dating:

With our variable inkjet or laser printers, we can put expiry dates, price or contents information, as well as test numbers or code number on any desired location of the label.

Label Checking:

With this electronic label checking station that can be integrated in the machine, a pusher can be controlled at the outlet that sorts out incorrectly glued bottles.

More than 30 Years of Tailor-Made Labelling Machines – Made in Germany

Just like Germany is dedicated to the art of brewing, we at GERNEP have been dedicated to our claim of "precision machine construction Made in Germany" for more than 30 years. Thanks to the solid know-how of Helmut Gerstberger, Berthold Neppel, and in the second generation Martin Hammerschmid in management, we maintain closeness to the customer that makes decisions possible in the fastest possible way and which makes it possible to complete projects economically and responsibly.

Consulting

Even before an order, we provide advice on the best and most economical solution, starting with optimum processing materials and practical label formats, right up to advanced labelling possibilities provided by our labelling machines.

Construction

Our labelling machines are adapted by our designers on the most modern CAD systems to meet the specific requirements. Through ongoing new developments, our machines are always state of the art.

Installation / Repair Service

With our worldwide customer service network, we offer reliable local support after the machine is put into operation.

Our technical service staff can be deployed worldwide in the shortest possible time if need be. We keep the maintenance and repair work to a minimum through our telephone service. That way, we simplify troubleshooting and repairs in a cost-saving way.

Project Management

Our practical development team will find the optimum solution for any planning requirement. We provide quick and uncomplicated consulting onsite and develop your project plans on the most modern CAD systems.

Made in Germany

As an accompaniment to our combined series and individual production on modern CNC machining centres, all work steps are documented for later conversions or expansions. Ongoing quality control and extensive trial runs before shipping the machine guarantee fast installation onsite.

Spare Parts Service

Our extensive spare parts service ensures fast availability in the event of repairs and conversions. Our well-stocked warehouse and flexible production guarantee an uninterrupted supply of all spare parts and fittings worldwide, even after years.
